

Pulse Power

Teddy Rauchway, Sani Mohottige, and Liam Alcalay

Our mission

Meet Pulse-Power

Features

1 Heart rate monitor

2 Temperature detection

3 Sleep-cycle graph

4 Ideal Wake Window Detection

Impact

People sleep in cycles of roughly 90 minutes. Waking up in the middle of one makes you question everything. The product aims to use parameters like resting heart rate, heart rate drop, temperature and temperature drops during different sleep stages to decide when it is a good time to send an alarm to wake up.
